

One Button Studio - Troubleshooting

This is how the display should look if the OBS system is functioning properly.

If the camera screen (small LED) is dark, check 3 cables going into the camera. Also, make sure the camera is on by checking the green light next to the On/Off button.

Most problems with the OBS system can be fixed by turning the entire system Off and back On using the power switch on the surge protector underneath the black cart.

If you are still having problems:

- Call 6-1189 to report the problem.
- After 6pm, submit a service ticket and put an Out Of Order sign on the closed and locked door.
